

INNOVATIVE solutions FOR ENTERPRISE

eTime the virtual clocking

eTime is the perfect solution for the geolocated virtual clocking and the personnel attendance tracking by smartphone. It is used for the personnel working in shops, construction sites, co-operatives, by the home care assistants and service providers.

It is appreciated by employees for its capacity to streamline the processes and the possibility to be used immediately, it helps the company to process data in a more simple, highly-reliable and cost-efficient way.

eTime is so immediate, secure, flexible, fast and precise that makes obsolete and that reduces cost and overcomes the need of physical traditional clocking devices.

-  Open to integration with your current company presence system or it is included with EcosAgile system
-  Precise with GPS, NFC, Beacons and QRcode
- Multilingual, with different active translations

COMPLIANT DATA PROTECTION AUTHORITY

eTime doesn't work in background, doesn't track the employee, doesn't damage the employee's privacy, even if it controls internally the anti-fraud operations it guarantees the company on the quality and reliability of the given data.

POWERFUL WITH TIME SYNC

eTime uses the geolocation, QRcode, sensors, and it works also with non signal, in confined spaces and without network, in Italy or abroad. The clocking will be transmitted to the server automatically during the next synchronisation.

SECURE WITH 6 ANTI-FRAUD ALGORITHMS

eTime is born aiming security in his project, to be reliable and to recognize the fraud attempts and the virtual clocking manipulation. The current version includes six different proprietary control algorithms anti clocking manipulation.
